The **View User Progress** tool lets you view various user-progress reports for each student and item within your course, along with a course average to reference the norm for your particular course. You also have the option of e-mailing users within this tool.

Click the **Edit Course** link in the navigation bar in your course, then click **View User Progress** under **Learner Management**.

**Note:** The **User Progress** screen initially displays the class progress summary; click an individual student’s name to see course progress for that student. The **User Progress** screen then displays information about the following course tools with which you can analyze a student’s progress (click any category for a detailed display):

- Summary
- Grades
- Objectives
- Content
- Discussions
- Dropbox
- Quizzes
- Checklist
- Surveys
- System Login History
